## Important Information on the H1N1 Flu Virus

With the recent concern of H1N1 Flu Virus BC Hockey would like to provide our members with some important information.

Dr. Mark Aubry, Hockey Canada's Chief Medical Officer recommended steps to take within a team environment to help prevent the spread of the infection. The eight (8) steps and additional information can be found on the [Hockey Canada website](#).

The Ministry for Healthy Living and Sport prepared a document for sport teams and organizations to help protect members and prevent the spread of the H1N1 flu virus.

The following techniques will assist teams in preventing the spread of the virus:

- Teach children and others involved in your sports team or organization to wash their hands frequently with soap and water for 20 seconds
- Ask athletes to carry hand sanitizer in their sports bags and to use it frequently
- Team members and athletes should not share water or juice bottles, cups or glasses. Each athlete or team member should use a personal water bottle
- Cough and sneeze into a tissue or into your sleeve or the inside of your elbow
- Stay at least two meters (six feet) away from people who are sick

Anyone involved or participating with a sports team who develops flu-like symptoms should be separated from teammates and groups to avoid passing the virus on to others. If you are sick, you should stay home and get well before joining your team for a practice or game.

Flu viruses spread from person to person mainly through droplets from the coughing or sneezing of a sick person. Flu viruses may also be spread when a person touches something contaminated with the virus and then touches his or her eyes, nose or mouth.

Teams and athletes who travel should monitor their health and avoid contact with sick people while traveling. If a team member or athlete develops a fever and a cough while travelling:

- Isolate the person, if possible, from travelling companions
- Practise respiratory hygiene (ie. Use and throw away tissues, coughing into a sleeve, washing hands, etc)
- Inform a health care provider of his or her symptoms
- Avoid direct contact with others if possible, unless directed to seek medical care

The symptoms of the H1N1 flu virus in people are similar to the symptoms of regular seasonal influenza

and include high fever, cough, headache, general aches, fatigue, eye pain, shortness of breath, and lack of appetite. Some people with the H1N1 flu have also reported runny nose, sore throat, nausea, vomiting and diarrhea.

You can call HealthLink BC at 8-1-1, 24 hours a day/seven days a week to speak to a nurse if you have more questions or are concerned about any illness/symptoms experienced by you or the members of your team or sports organization.
